Summary

Full Stack Developer with experience in React and ASP.NET Core using CQRS architecture. Currently building and maintaining an enterprise HRMS platform serving 12,000+ active users across 50+ client organizations. Skilled in production support, database management, debugging legacy code, and delivering scalable, reliable applications.

Experience

- **Eruna Technologies** — Bengaluru, India
  Software Developer — *September 2025 – Present*
  - **Development & Code Maintenance**: Developed new modules while maintaining and debugging legacy code, improving system stability, performance, and feature coverage.
  - **Database Operations**: Maintained Production, Staging, and Development databases, ensuring consistency and data integrity.
  - **Production Support**: Resolved live production issues through log analysis and root-cause debugging.
  - **Collaboration**: Worked closely with QA and support teams to deploy fixes and enhancements efficiently.
- **KodNest Technologies — Full Stack Java Trainee** — Bengaluru, India
  Trainee — *May 2025 - Jan 2026*
  - **Training**: Hands-on training in Core/Advanced Java, Spring Boot, and MySQL; solved 70+ coding challenges.
- **Rooman Technologies** — Remote
  MERN-Stack Intern — *October 2024 - March 2025*
  - **Full-Stack Applications**: Designed and deployed 3+ MERN full-stack apps, boosting development speed by 40%.
  - **Secure Authentication**: Executed JWT-based authentication and role-based access control.

Skills Summary

- **Languages**: C#, Java, JavaScript, SQL
- **Frontend**: React.js, HTML, CSS, Tailwind
- **Backend**: ASP.NET Core, Node.js, REST API
- **Architecture**: CQRS, MVC
- **Databases**: MongoDB, PostgreSQL
- **Cloud**: AWS EC2, AWS S3 (Bucket)
- **Tools**: Git, Postman, Axios
- **Others**: Debugging, Production Support, Code Review

Projects

- **HR Management System**
  ASP.NET Core, C#, CQRS (MediatR), EF Core, PostgreSQL, MongoDB, AWS S3
  - **API & Architecture**: Built command/query handlers for HR modules (Acccess Control, leave, exit management) on a CQRS/MediatR architecture, with EF Core transactions ensuring data integrity across operations.
  - **Data Management**: Reconciled denormalized data between MongoDB and a PostgreSQL source of truth, generating bulk update queries to sync geographic hierarchy and employee records across documents.
  - **Storage & Scale**: Integrated AWS S3 for document and file storage and implemented soft-delete reactivation logic in dynamic entity mapping; platform serves 12,000+ users across 50+ organizations.
- **Ruchi Hub**
  Java, Spring Boot, Spring Security, JWT, MySQL — *March 2025*
  - **Programmed 12+ secure REST APIs**: Created with Spring Boot, supporting JWT authentication and scalable role-based access.
  - **Implemented core features**: User login, restaurant CRUD, and order management, reducing response time by 30%.
- **Sign Language Detection for Video Conferencing**
  Python, TensorFlow, MediaPipe, OpenCV — *May 2025*
  - **Built real-time recognition tool**: Engineered a system capable of identifying 20+ hand gestures with 90%+ accuracy using TensorFlow and MediaPipe.
  - **Integrated gesture recognition**: Connected with webcam feed using OpenCV for real-time detection.

Education

- **Don Bosco Institute of Technology** — Bengaluru, India
  Bachelor of Technology - Computer Science and Engineering; GPA: 8.9 — *December 2021 - May 2025*
  Courses: *Data Structures, Algorithms, OS, DBMS, OOP, AI*
